Let's run an acceptance survey for a new Pitanga with Ginger soft drink. The PesquisadorPrincipal should introduce the product, ask the three evaluators for their opinions, and collect whether each one liked or disliked it, with a short reason and a score from 0 to 10. At the end, the PesquisadorPrincipal should summarize the answers and decide if the product was well accepted. The product is considered well accepted if at least 2 out of 3 evaluators liked it.
